USER`S MANUAL

Thanks for buying the **VGC** VR-200series transceiver. This transceiver offers latest in design, multi-functionality, stable behaviour and easy operation. We believe you will be pleased with the high quality and dependable features for all your communication needs.

VR-200

Vero Global Communication Co Limited

User Safety, Training, and General Information

READ THIS IMPORTANT INFORMATION ON SAFE AND EFFICIENT OPERATION BEFORE USING YOUR **VGC** PORTABLE TWO-WAY RADIO.

Compliance with RF Energy Exposure Standards

Your **VGC** two-way radio is designed and tested to comply with a number of national and international standards and guidelines (listed below) regarding human exposure to radio frequency electromagnetic energy. This radio complies with the IEEE (FCC) and ICNIRP exposure limits for occupational/controlled RF exposure environment at duty cycles of up to 50% talk-50% listen and should be used for occupational use only. In terms of measuring RF energy for compliance with the FCC exposure guidelines, your radio radiates measurable RF energy only while it is transmitting (during talking), not when it is receiving (listening) or in standby mode.

⚠️
NOTE

>> The approved batteries supplied with this radio are rated for a 5-5-90 duty cycle (5% talk-5% listen-90% standby), even though this radio complies with the FCC occupational RF exposure limits at duty cycles of up to 50% talk.

VGC
Professional FM Transceiver

Your **VGC** two-way radio Complies with the following of RF energy exposure standards and guidelines:

ï United States Federal Communications Commission, Code of Federal Regulations; 47CFR part 2 sub-part J

ï American National Standards Institute (ANSI)/Institute of Electrical and Electronic Engineers (IEEE) C95. 1-1992

ï Institute of Electrical and Electronic Engineers (IEEE) C95. 1-1999 Edition

ï International Commission on Non-Ionizing Radiation Protection (ICNIRP) 1998

Operational Instructions and Training Guidelines

To ensure optimal performance and compliance with the occupational/controlled environment RF energy exposure limits in the above standards and guidelines, users should transmit no more than 50% of the time and always adhere to the following procedures:

Transmit and Receive

To transmit (talk), push the Push-To-Talk (PTT) button; to receive, release the PTT button.

Hand-held radio operation

Hold the radio in a vertical position with the microphone 5 cm away from the lips and let the antenna

farther away from your head.

Body-worn operation

Always place the radio in an VGC approved clip, holder, holster, case, or body harness for this product. Use of non- VGC -approved accessories may exceed FCC RF exposure guidelines.

Antennas & Batteries

Hold the radio in a body-worn operation >2.5cm away form the clip and let the antenna keepaway form the body as possible.

• Use only VGC approved, supplied antenna or VGC approved replacement antenna.

• Unauthorized antennas, modifications, or attachments could damage the radio and may violate FCC regulations.

• Use only VGC approved, supplied batteries or VGC approved replacement batteries.

• Use of non- VGC -approved batteries may exceed FCC RF exposure guidelines.

Approved Accessories

For a list of VGC approved accessories,see the accessories page of this user manual or visit the following website which lists approved accessories:http://www.verotelecom.com

VGC
Professional FM Transceiver

Notices to the User

• Government law prohibits the operation of unlicensed radio transmitters within the territories under government control.

• Illegal operation is punishable by fine or imprisonment or both.

• Refer service to qualified technicians only.

WARNING: It is important that the operator is aware of and understand hazards common to the operation of any transceiver. Explosive environment(such as gases, dust, fumes, etc). Turn off your transceiver while talking on fuel, or while parked in gasoline service stations.

If you require this machine to be developed or some changed, pleased connect with

or your VGC dealer.

FCC Caution:

This equipment has been tested and found to comply with the part 90 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does

cause harmfu l interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following

Measures:

ï Reorient or relocate the receiving antenna.

ï Increase the separation between the equipment and receiver.

ï Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

ï Consult the dealer or an experienced radio/TV technician for help.

FCC Licensing Requirements

Your radio must be properly licensed Federal Communications Commission prior to use. Your **VGC** Wireless dealer can assist you in meeting these requirements. Your dealer will program each radio with your authorized frequencies, signaling codes, etc., and will be there to meet your communications needs as your system expands.

VGC
Professional FM Transceiver

Precautions

Only qualified technicians are allowed to maintain this product.

Do not use the radio or charge a battery in explosive areas such as coal gas, dust, steam, etc.

Switch OFF the radio while refueling or parking at gas station.

Do not modify or adjust this radio without permission.

Do not expose the radio to direct sunlight over a long time, nor place it close to heating source.

Do not place the radio in excessively dusty, humid areas, nor on unstable surfaces.

Safety: It is important that the operator is aware of and understands hazards common to the operation of any radio.

CE Caution:

Hereby, **VGC** declares that this Two-way radio is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

A copy of the DOC may be obtained through the following address.

Unpacking and checking of your equipment

Carefully unpack the transceiver. We recommend that you identify the items in the following table before discarding the packing material. If any items are missing or have been damaged during shipment, please notify your   dealer.

Supplied accessories

Transceiver	High gain antenna	Li-ion batterypack	Intelligent charger
Beltclip	Handstrap	User's manual	Service card
Description of functions

VGC
Professional FM Transceiver

1. VHF: 66-88MHz   VHF: 136-174MHz   VHF: 245-246MHz
    UHF: 300-350MHz   UHF: 350-390MHz   UHF: 400-470.9875MHz   UHF: 450-520MHz
2. Output power: VHF: 5W/1W   UHF: 4W/1W
3. 200 memory channels
4. DTMF encoding and decoding
5. 5 tones (including 15 kinds standard)
6. 2 tones
7. 1750Hz burst tone
8. Priority scan
9. FM radio with frequency display
10. DCS/CTCSS of RX and TX can be set respectively.
11. ANI (caller ID)
12. VOX
13. All calls, group calls and selective calls function
14. Calling ring function
15. Scrambler
16. 105 groups DCS/50 groups CTCSS
17. Voiceguide (English/Chinese)
18. Wide/Narrow bandwidth selection (25KHz/12.5KHz)
19. Three color backlight display
20. Channel order, channel frequency, channel name multi-display method

21. Channel name edit available.
22. Reverse frequency function
23. Distant urgency alarm function
24. Multi scan function
25. Channel steps (5/6.25/10/12.5/25KHz)
26. High/Low power changeable when on transmitting.
27. Intelligentcharger (Warning sound and dualcolor light)
28. TX/RX splitselection (0-99.950MHz)
29. Set frequencyshift direction
30. Stopwatchtimer function
31. Busy channel lockout
32. Multi display modes when power on (full screen / Batt-V / others)
33. Lowvoltage batterypack voiceprompt
34. Transmit overtime prompt
35. Keyboard lock (auto / manual)
36. Adding channelscan function
37. Programmable by computer
38. Menu / Channel reset
39. Wireclone function
40. Powersaving function
41. voice compress function

How to operate

Professional FM Transceiver

Lock menu functions

If you don't need operate operate menu functions frequently, you can turn off by KG-679E programming software.

The steps as following:

1. Set password of switching between channelmode and frequencymode.
2. Set workmode as channelmode.
3. Turn off operating menu function in channelmode.

When you want to use menu functions, input password which you have set, and switch to frequency-mode, then you can operate it.

Setting channel step (STEP) ---- MENU 1

In standby, press [MENU] + △UP / ▽DOWN , till the screen display " *STEP* "

Press [MENU] enter, press △UP / ▽DOWN to select the channel step you desired.

Press [MENU] to confirm, then press [EXIT] to return to standby.

This transceiver has the option of 5KHz, 6.25KHz, 10KHz, 12.5KHz and 25KHz steps.

⚠ **NOTE**

≫ In channelmode the next settings are not available to change: transmit power,companding , receive CTCSS and DCS, transmit CTCSS and DCS, optional signal, channel bandwidth, encoding signal, mutemode, PTT transmit , Voice encrypt compress, busy channellockout and adding channelscan.

14

Setting squelch level (SQL-LE) --- MENU 2

Select the level of squelch so that you will have no difficulty receiving the desired signal. When you set the level too high you will loose communication in a fringe area.

> ≫ This transceiver has steps from 0-9, which step 0 is always open squelch. From 1 to 9 gives different levels of noise reduction.

In standby, press [MENU] + number [SQL 2] and the screen will display [" SQL-LE ?]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] to select the desired level .

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting batterypack savemode (SAVE)--- MENU3

In standby, press [MENU] + number [SAVE 3] and the screen will display [" SAVE 3]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] select one of 1:1/ 1:2/1:3/1:4/OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

1:1/1:2/1:3/1:4 means the radio receive circuit turn on and off pulse ratio.

Selecting transmitpower (TXP)--- MENU4

In frequencymode, press [MENU] + number [TXP 4] and the screen will display [" TXP 4]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] and select the desired powerlevel.

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠️
NOTE

> ≫ This transmitpower has 10 levels can be selected, this means it will higher and higher from 1 to 10. High/Low power can be changed during transmit. Press PTT key and topkey at the same time, this will change High/Low power.

Setting voice encrypt compress (SCR)--- MENU 5

SCR: Use the scrambler, it can encrypt the communication and make the transceiver who do not use the scrambler can't hear clear what you are talking, meanwhile you also can't hear clear others, who do not use the scrambler, what they are talking.

In standby, press [MENU] + number [SCR 5] and the screen will display [" SCR 5]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] and select OFF to switch off this function or turn on SCR.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Transmit over timer (TOT) ---- MENU 6

The TOT is designed to prevent your radio to transmit too long. When the transceiver is exceeding the preset time limit, it will stop transmitting and give you a warning signal.

This transceiver can be set in 40 steps of 15 seconds, between 15 and 600 seconds.

In standby, press [MENU] +[TOT 6] and the screen will display [ᴛᴏᴛ   ₆]

Press [MENU] enter, press[UP] / [DOWN] to select the level you need when on transmitting.

Press [MENU] to confirm, then press[EXIT] to return to standby.

Setting VOX (VOX) ---- MENU 7

In standby, press [MENU] + number[VOX 7] and the screen will display [ᴠᴏx   ₇]

Press [MENU] enter, press[UP] / [DOWN] to select VOX OFF or to switch on the 1 to 10 different sensitivity-levels. Press [MENU] to confirm, then press [EXIT] to return to standby.

Professional FM Transceiver

Setting wide and narrow bandwidth (WN) ---- MENU 8

In standby, press [MENU] + number [W&N 8] and the screen will display [ᴡɴ   ₈]

Press [MENU] enter, press[UP] / [DOWN] and you can select WIDE or NARROW bandwidth.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting auto backlight (ABR) ---- MENU 9

It means that the time of radio return to standby state after receive the signal.

In standby, press [MENU]+number[ABR 9] and the screen will display [ᴀʙʀ   ₉]

Press [MENU] enter, press [UP] / [DOWN] key and select 1 to 5 to turn on auto backlight or when you want to switch OFF backlight. Press[MENU] to confirm, then press [EXIT] to return to standby.

Setting receive CTCSS (R-CTCS) ---- MENU 10

Sometimes may be you only want to hear the calling which comes from the specific individual or group, then you can ignore some (can not hear from others who using the same frequency) calling through CTCSS/DCS.Only when receive the same signal of CTCSS/DCS,the radio will release the mutemode.

In standby, press [MENU] + number [STEP1] [CLR]   and the screen will display `R-CTCS 10`

Press [MENU] enter, press [UP] / [DOWN] and select OFF to switch off CTCSS or use one of the tones between 67Hz and 254.1Hz.

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠
NOTE

≫ This transceiver has 50 groups different CTCSS tones, see appendix (1) CTCSS frequency sheet.

Setting receive DCS (R-DCS) ---- MENU 11

In frequencymode, press [MENU] + number [STEP1] [STEP1]   and the screen will display `R-DCS 11`

Press [MENU] enter, press [UP] / [DOWN] and select OFF to switch off DCS or one of the steps from D023N to D754I.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Professional FM Transceiver

⚠
NOTE

≫ This transceiver has 105 groups different DCS codes, see appendix (2) DCS frequency sheet. And DxxxN means positive code, DxxxI means negative code. The range of positive code is between D023N and D754N,negative code is between D023I and D754I.

Setting transmit CTCSS (T-CTCS) ---- MENU 12

In standby, press [MENU] + number [STEP1] [SQL2]   and the screen will display `T-CTCS 12`

Press [MENU] enter, press [UP] / [DOWN] and select OFF to switch off CTCSS or use one of the tones between 67Hz and 254.1Hz.

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠
NOTE

≫ This transceiver has 50 groups different CTCSS tones, see appendix (1) CTCSS frequency sheet.

Setting transmit DCS (T-DCS) ---- MENU 13

In frequencymode, press [MENU] + number [STEP 1] [SAVE 3] and the screen will display [" 𝒯-𝒟𝒞𝒮 ₁₃]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] and select OFF to switch off DCS or one of the steps from D023N to D754I. Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠

NOTE

≫ This transceiver has 105 groups different DCS codes, see appendix (2) DCS frequency sheet. And DxxxN means positive code,Dxxxl means negative code.The range of positive code is between D023N and D754N, negative code is between D023I and D754I.

Setting voiceguide (VOICE) ---- MENU 14

In standby, press [MENU] + number [STEP 1] [TXP 4] and the screen will display [" 𝒱𝒪𝐼𝒞𝐸 ₁₄]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] key to select English or OFF to switch off the voiceguide.

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠

NOTE

≫ If want turn off all keypad voiceguide should turn off MENU15 and MENU14 at the same time.

Setting beepprompt function (BEEP) ---- MENU 15

Beepprompt is to tell you if the transceiver is operating well or has a malfunction.

We kindly advice you to switch on this function.

This function will inform you for any possible malfunction.

In standby, press [MENU] + number [STEP 1] [SQR 5] and the screen will display [" 𝐵𝐸𝐸𝒫 ₁₅]

Press [MENU] enter, press [▲ UP] / [DOWN ▼] to switch on the beep or OFF when you want to switch off the beep.

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠

NOTE

≫ When MENU 14 is switched on, the voice guide gets priority.

Setting DTMF sidetone (DTMFST) ---- MENU 16

DTMF sidetone gives you the opportunity to switch on or off the speaker when transmit DTMF.

The transceiver has 4 different options.

KEY: Switch on sidekey when transmitting.

ANI: Switch on the ANI sidetone when transmitting.

BOTH: Sidekey and ANI are both on.

OFF: Turn off all.

In standby, press [MENU] + number [STEP 1] [TOT 6] and the screen will display [" STDTMF ⊞ 16]

Press [MENU] enter, press [⬆ UP] / [DOWN ▼] and select one function of KEY/ANI/BOTH/OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting transmit overtime alarm (TOA) ---- MENU 17

Transmit overtime alarm is the setting to alarm the user that he/she has reached the preset time and a voiceprompt and light will flicker during transmit.

The transceiver can be set from 1 to 10 TOA in steps of 1 second.

In standby, press [MENU] + number [STEP 1] [VOX 7] and the screen will display [" TOA ⊞ 17]

Press [MENU] enter, press [⬆ UP] / [DOWN ▼] to select OFF or to set 1 to 10 for the overtime alarm.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Busy channel lockout (BCL) ---- MENU 18

This function is to prevent that interfere others who is on communicating. If the channel you have selected which is using by other radio, at this time press PTT key, you can not transmit.

In frequencymode, press [MENU] + number [STEP 1] [WBN 8] and the screen will display [" BCL ⊞ 18]

Press [MENU] enter, press [⬆ UP] / [DOWN ▼] and select between ON or OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Adding channelscan (SC-ADD) ---- MENU 19

This function ensure that whether the frequency or channel be added to scan list or not.

In frequencymode, press [MENU] + number [STEP 1] [ABR 9] and the screen will display [SC-ADD ⊞ 19]

Press [MENU] enter, press [⬆ UP] / [DOWN ▼] and select between ON or OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Priority scan function (PRI-SC) ---- MENU 20

When the transceiver is in non-priority frequencymode, it still check activity of the priority channel, once there has an action at priority channel, the transceiver will auto work in the priority channel.

In frequencymode, press [MENU] + number [SQL 2] [CLK 0] and the screen will display ["PRI-SC ⊞ 20]

Press [MENU] enter, press [⬆ UP] / [DOWN ▼] to turn on or turn off.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting priority channel scan function (PRI-CH) ---- MENU 21

This function means any channel which has been programmed can be set as priority scan channel.

In frequencymode, press [MENU] + number [SQ.2][STEP.1] and the screen will display "PRI-CH 21"

Press [MENU] enter, press [UP] / [DOWN] select the desired channel.

Press [MENU] to confirm, then press [EXIT] to return to standby.

NOTE

» This transceiver priority scan channel from 0 to 199 can selectable.
» There is only dispaly a "PRI" on LCD screen, that means radio has startup priority channel scan.
» Startup priority channel scan function needs two conditions: 1. Do priority channel scan switch on. 2. This function scan the channel which has been stored.
» In frequencymode, channelmode or scanning, when transceiver scans a signal, it will transfer the priority channel, after the signal disappeared 3 seconds if you don't do any operation, transceiver will back to frequency and go on priority scan.
» The speed of startup or resume priority scan is relative to the setting backlight. When if the backlight be set as "1", then the speed of startup or resume priority scan will be the fastest.
» When the priority channel which has been set parameter receive signal, if with the same frequency, then radio can transfer the priority chnanel.
» The transfered priority channel only be used to communcation, you can't do any other operation until radio resumes frequency.

Setting scanmode (SC-REV) ---- MENU 22

The transceiver will stop scanning when detect the frequency(memory channel) of signal. According to the method of restoring that you selected, the transceiver will resume or stop scanning.

The transceiver has three scanmodes.

TO: After signal in channel disappears the transceiver will start scanning if you don't any operation within 5 seconds.

CO: After the transceiver stopped on a signal it will resume scanning again in 3 seconds when signal disappears.

SE: Scanning will stop when receives a signal.

In standby, press [MENU] + number [SQ.2][SQ.2] and the screen will display "SC-REV 22"

Press [MENU] enter, press [UP] / [DOWN] and select TO, CO or SE.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Switch on scanning: Press the [SCAN] via keyboard.

Setting option signal (OPTSIG) ---- MENU 23

In standby, press [MENU]+ number [SQL.2][SAVE.3]   and the screen will display [" OPTSG 23]

Press [MENU] enter, press[▲UP] / [▽DOWN] select one kind of WDTS/DTMF/2-TONES/5-TONES.

Press [MENU] to confirm, then press[EXIT] to return to standby.

All calls, group calls and selective calls

This transceiver has the function of transmitting ANI ID code,editing ANI ID code and decoding DTMF.

Without by other tools, it can accomplish the operatioin of all calls, group calls and selective calls.

How to program all calls, group calls and selective calls.

1. Edit ANI

This transceiver has 3 kinds of method:

  . ANI-XXX   . ANI-XXXX   . ANI-XXXXX

XXX: Means can program 3 bits ANI ID CODE.

XXXX: Means can program 4 bits ANI ID CODE.

XXXXX: Means can program 5 bits ANI ID CODE.

X   XXXX
Grouplist   A unique ANI ID CODE
1 to 9 groups | From 0000 to 9999 maximum

This is how to build up ANI.

Edit method: see to the MENU 48.

⚠️ **NOTE**

≫ Every transceiver in the group needs a unique ANI ID CODE.

2. Setting all calls, group calls and selective calls.

⚠️ **NOTE**

≫ Every transceiver using in the group must be set turn on WDTS optional signal.
≫ Setting WDTS option signal, the details see to the MENU 23 (OPTSIG).

3. Setting mutemode must be set as AND, the details see to the MENU 24(SPMUTE)

4. Press PTT: Setting time according your need to select one of the BOT/EOT/BOTH,the details see to the MENU (25)

5. Turn on ringtime alarm and set ringtime(set when needed) The details see to the MENU (30) and MENU 31(RING-T)

6. Setting PTT-LT

In fact, the signal can delay before transmitted. The details see to the MENU (26)

⚠️
NOTE

≫ All transceivers in the same group must set their radio to the same frequency, channel and parameter.

a. Using All calls

Press PTT to transmitting, after transmitting ANI ID CODE, input [⚹ SCAN] + [#] directly by keyboard.

b. Using group calls

Press PTT to transmitting, after transmitting ANI ID CODE, input [group number] + [⚹ SCAN] + [#] directly by the keyboard (Using three ID codes as an example).

c. Using selective calls

Press PTT to transmitting, after transmitting ANI ID CODE, input the ANI ID CODE you want to call by keyboard.

⚠️
NOTE

≫ This transceiver has memory function, after you used all calls, group calls or selective calls, then you want to transmit again, the ID code is the same as last time you transmitted. If you want to transmit new ID code, please press [EXIT] before transmitting.

≫ This transceiver has difference of 3,4,5 bit. so all the ANI ID CODE in the group have better set the same bit. When the bit of transmitter is lower than receiver's, you can use the [⚹ SCAN] to make up, then you can go on all calls, group calls or selective calls.

Professional FM Transceiver

DTMF, 2-TONES, 5-TONES.

1. When DTMF/2-TONES/5-TONES signaling is programmed in a channel. Press PTT key to transmit DTMF/2-TONES/5-TONES signal.

2. When DTMF/2-TONES/5-TONES is set in a channel , the preset functions will be activated only when the matching DTMF/2-TONES/5-TONES signals are received.

3. Likewise, your signals will be received only by parties using the same DTMF/2-TONES/5-TONES.

4. Setting signal

Every transceiver in the same group must be set DTMF/2-TONES/5-TONES option signal, the details see to the MENU (23).

Setting sidetone the details see to the MENU (16), according your requirement to select.

Mutemode must be set as AND. the details see to the MENU (24)

Setting PTT transmit

Depend on your requirement to select one of the BOT/EOT/BOTH, the details see to the MENU (25)

Setting S-INFO

The receiver's and the transmitter's signaling must be set the same.

Setting PTT-LT

In fact, the signal can delay before transmitted, the details see to the MENU (26)

Setting mutemode (SPMUTE) ---- MENU 24

The mutemode is to turn on/off the speaker audio according to your optional signal setting.

This transceiver has three kinds of mode which can be selected.

1. QT: When the transceiver receives a signal and suited CTCSS tone it will switch on the speaker.
   When transceiver has not be set a CTCSS tone, then receives a signal which can switch on squelch it
   also can switch on speaker.

2. AND: When the transceiver receives a suited QT and matching signal it will switch on the speaker.

3. OR: When the transceiver receives a suited QT or AND signal it will switch on the speaker.

In frequencymode, press MENU + number SQL2 TXP4 and the screen will display "SPMUTE 24

Press MENU enter, press UP / DOWN and select one of QT or AND or OR.

Press MENU to confirm, press EXIT to return to standby.

PTT ID (PTT-ID) ---- MENU 25

PTT ID means that the method of choosing the transmitting ID code.

BOT:When press PTT key,ID code is transmitted.

EOT:When release PTT key,ID code is transmitted.

BOTH: When press or release PTT key,ID code is transmitted.

OFF: The radio canít transmits ID code when turn off all.

Professional FM Transceiver

In frequencymode, press MENU + number SQL2 SCR5 and the screen will display "PTT-ID 25

Press MENU enter, press UP / DOWN select one of BOT/EOT/BOTH/OFF.

Press MENU to confirm, then press EXIT to return to standby.

Setting ANI ID CODE transmit (PTT-LT) ---- MENU 26

Setting ANI ID CODE on transmit is needed to send ANI ID code everytime when you press your PTT key.

1-30: Permit transmit ANI delayed time from 1 to 30. Unit: 100ms

0: Do not delay to transmit ANI ID CODE

In standby, press MENU + number SQL2 TOT6 and the screen will display "PTT-LT 26

Press MENU enter, press UP / DOWN select 1 to 30 for delay transmit ANI or OFF to switch off ANI delay

transmit. Press MENU to confirm, then press EXIT to return to standby.

⚠

NOTE

≫ When alarming, if this menu does not be set as "0", but be set one of the number between 1 and 30, then the
setting delayed time will be delayed to transmit signalcode and alarmcode.

≫ When the frequency has set WDTS/DTMF/2TONES/5TONES signals, if this menu does not be set as "0", but
be set one of the number between 1 and 30,then the setting delayed time will be delayed to transmit signalcode.

Setting signal information (S-INFO) ---- MENU 27

This function means selects information code which be used to program channelsignal.

In frequencymode, press [MENU] + number [SQL 2] [VOX 7] and the screen will display [⌐S-INFO 27]

Press [MENU] enter, press [UP] / [DOWN] select from 1 to 15.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Emergency calling type (EMC-TP)---MENU 28

This transceiver has 3 kinds function.

1. ALARM: Field alarm

2. ENI: Distant alarm

3. BOTH: Field + distant alarm

In frequency mode, press [MENU] + number [SQL 2] [W&N 8] and the screen will display [⌐EMC-TP 28]

Press [MENU] enter, press [UP] / [DOWN] select ALARM/ENI/BOTH

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠️
NOTE

≫ In frequencymode or channelmode, only be set as ENI and BOTH, then can use the alarm channel to alarm.
≫ In frequencymode or channelmode, if you do not set alarm channel, then it will alarm at the present channel.

Emergency calling channel (EMC-CH)---MENU 29

Select any of the channel which had been set for emergency calling.

In standby mode, press [MENU] + number [SQL 2] [ABR 9] and the screen will display [⌐EMC-CH 29]

Press [MENU] enter, press [UP] / [DOWN] select the desired channel,

Press [MENU] to confirm, then press [EXIT] to return to standby.

Select ringmode (RING-M)---MENU 30

Setting calling ring means after the transceiver receive the matching signal, it will be announced from the speaker.

This transceiver has 4 kinds of ringmode can be selectable.

SOUND:Turn on ring

BIV: Turn on libration

BOTH: Turn on ring and libration

OFF: Turn off all.

In frequencymode, press [MENU] + number [SAVE 3] [CLR 0] and the screen will display [⌐RING-M 30]

Press [MENU] enter, press [UP] / [DOWN] select one of SOUND/BIV/BOTH/OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting ringtime(RING-T)---MENU 31

When exceed the preset ringtime, it will switch on the speaker.

In standby, press⌨MENU + number ⌨SAVE3 ⌨STEP1 and the screen will display ⌊ᴿᴿᴵᴺᴳ‑ᵀ 3ⁱ⌉

Press ⌨MENU enter, press ⌨UP / ⌨DOWN to select the time of the ring between 0 and 10.

Press ⌨MENU to confirm, then press ⌨EXIT to return to standby.

⚠

NOTE

≫ This transceiver has 10 different steps of ringtime of which every step is 1 second difference, this means that 0 will switch off the ring.

Edit channelname (CHNAME) ---- MENU 32

1. Channelname can be made up of 26 letters (A to Z), 10 numbers (0 to 9) or (?) (+) (-), with any of the 3 last symbols.

2. Channelname can have a length of maximum of 6 bits or you can edit one of the bits from 1 to 6.

3. When you select the (-) symbol it means that the bit is blank.

Edit method

1. Via KG-679E programming software.

---

2. Via keyboard of transceiver.

Edit Channelname

1. At least one channel should have been stored.

2. The transceiver should be work in channelmode.

3. Enter the channelname edit menu, then press ⌨UP / ⌨DOWN to select character, press ⌨# to select edit position.

Edit step

1. If the transceiver works in frequencymode, set the workmode as NAME in the display then press ⌨MENU and power on again.

   If the transceiver works in CH mode, then go through MENU 34 to set display to NAME.

2. Select the desired channel, press ⌨MENU + ⌨SAVE3 + ⌨SQL2 + ⌨MENU and then the screen will display 6 rails, press ⌨UP / ⌨DOWN and select character then press ⌨# , press ⌨UP / ⌨DOWN again to select the second character, after selecting the sixth character press ⌨MENU to confirm, press ⌨EXIT to exit.

   The screen will display the channelname and show the order of this channel on top right corner.

Setting working mode (CA-MDF)---MENU 34

This transceiver has three selectable display modes: channelorder display, channelfrequency + channelorder display, channelname + channelorder display.

In standby, press [MENU] + number [SAVE 3] [TXP 4] and the screen will display [" CA--MDF 34]

1. Channelorder display mode

Press [MENU] enter, press [UP] / [DOWN] select CH and the screen will display [" CH 34]

Press [MENU] to confirm, then press [EXIT] to exit.

2. Channelfrequency + Channelorder display mode

Press [MENU] enter, press [UP] / [DOWN] select FREQ and the screen will display [" FREQ 34]

Press [MENU] to confirm, then press [EXIT] to exit.

3. Channelname + Channelorder display mode

Press [MENU] enter, press [UP] / [DOWN] select NAME and the screen will display [" NAME 34]

Press [MENU] to confirm, then press [EXIT] to exit.

Channelname display mode: To operate this function you need to edit the channelname first.

See details of channelname edit in MENU 32.

VGC
Professional FM Transceiver

Setting keyboard lock (AUTOLK) ---- MENU36

The transceiver has two options, auto lock and manual lock.

AUTOLK: When you set autolock the keyboard will be locked within 15 seconds if you don't to any operation. To release keyboard press [_#] for more than 2 seconds.

OFF: Turn off auto lock.

In frequencymode, press [MENU] + number [SAVE 3] [TOT 6] and the screen will display [" AUTOLK 36]

Press [MENU] enter, press [UP] / [DOWN] and select ON for autolock or OFF to switch off autolock.

Press [MENU] to confirm, then press [EXIT] to return to standby.

⚠️
NOTE

≫ Manual lock: In standby, press [SCAN *] for more than 2 seconds will lock keyboard, release keyboard press [SCAN *] for more than 2 seconds.

Setting power on message (PONMSG) ---- MENU 37

Transceiver power on message:

FULL: Full display   BATT-V: Display the current voltage of batterypack   MSG: WELCOME

In standby, press [MENU] + number [SAVE 3] [VOX 7]   and the screen will display [PONMSG 37]

Press [MENU] enter, press [UP] / [DOWN] and select FULL/BATT-V/ MSG,

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting sidekey 1(PF1)---MNEU 38

This transceiver sidekey 1 has 5 kinds function can be selected:

1. FM: FM radio key

2. CALL: Signal calling at present.

3. NO-SUB: Cancel receive DCS

4. JP-PRI: Switch to priority scan channel.

5. JP-EMC: Switch to emergency calling mode.

1. Select FM radio function.

In standby, press the sidekey 1 to switch on FM radio, this FM radio is frequency modulation, frequency range is 87-108MHz, and the screen will display [FM 38]

a. In FM radio, press [UP] / [DOWN] or number to select program

b. Press [EXIT]   , you can check the working frequency and channel, after 2 seconds the screen will resume [FM 38] , the radio works in normally when you are on operation

c. Press PTT, sidekey 2 and topkey, it will into the relevant operation.

When you want to turn off radio, press sidekey 1 again.

When you turn on the FM radio, you should install supplied antenna.

In standby, press [MENU] +number [SAVE 3] [W&N 8]   and the screen will display [PF 1 38]

Press [MENU] enter, press [UP] / [DOWN] and select one of the FM/CALL/NO-SUB/JP-PRI/JR-EMC.

press [MENU] to confirm, then press [EXIT]   to return to standby.

NOTE

≫ When in FM radio, the present frequency or channel are still in standby, if transceiver receives a signal,it will return to radio, After the signal disappeared 5 seconds, it will auto return to FM radio. If you want to exit FM radio, please press sidekey 1 again.

≫ You can use the software to edit the channel of FM radio, make the radio can display the frequency and radio's name on LCD screen, after you have succeed in programming, press the sidekey 1 to turn on FM radio, now you not only can use the channel knob to switch channel, but also can use [UP] / [DOWN] to switch. If the radio don't have channel knob, you can use [UP] / [DOWN] to switch FM radio channel.

Setting topkey (PF2) ---MENU 39

The topkey offers two kinds of function:

EMCALL: Start up alarm function

CALL01-CALL15: Signal calling key

Select EMCALL function

In standby, press [MENU] + number [SAVE 3] [ABR 9] and the screen will display [PF2]

Press [MENU] enter, press [UP] / [DOWN] and select EMCALL.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Signal calling key

In standby, press [MENU] + number [SAVE 3] [ABR 9] and the screen will display [PF2]

Press [MENU] enter, press [UP] / [DOWN] select one of function from CALL01 to CALL15,

press [MENU] to confirm, then press [EXIT] to return to standby.

⚠️
NOTE

≫ CALL01-CALL15: Means the information code which has been set as calling signal, when PF2 has been set as one kind of CALL01-CALL15, then press PF2 one time, meanwhile the LED A and B flicker each other. When the information code of signal has been set as the same as others and other functions are also the same, then press PTT you can communicate each other, also you can communicate when the LED is flickering.

Define MONI key (MONI) ---- MENU 40

This function is defined for turnning on squelch diagram.

Total have 2 kinds function can be selected.

CONTIN: Should always press side key 2 to persist turn off squelch diagram.

PRESS: Just need press side key 2 one time to persist turn off squelch diagram.

In standby, press [MENU] + number [TXP 4] [CLK 0] and the screen display [WT-LED]

Press [MENU] enter, Press [UP] / [DOWN] select CONTIN/PRESS

Press [MENU] to confirm, then press [EXIT] to return to standby.

Selecting standby display color (WT-LED) ---- MENU 41

The transceiver has four colors available:

BLUE / ORANGE / PURPLE / OFF

In standby, press [MENU] + number [TXP 4] [STEP 1] and the screen will display [WT-LED]

Press [MENU] enter, press [UP] / [DOWN] and select the desired color of BLUE/ORANGE/PURPLE/OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Selecting receive display color (RX-LED) ---- MENU 42

The transceiver has four colors available:

BLUE / ORANGE / PURPLE / OFF

In standby, press [MENU] + number [TXP 4] [SQL 2] and the screen will display ["RX-LED 42"]

Press [MENU] enter, press [UP] / [DOWN] and select the desired color of BLUE / ORANGE / PURPLE/OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Selecting transmit display color (TX-LED) ---- MENU 43

The transceiver has four colors available:

BLUE / ORANGE / PURPLE/OFF

In standby, press [MENU] + number [TXP 4] [SAVE 3] and the screen will display ["TX-LED 43"]

Press [MENU] enter, press [UP] / [DOWN] and select the desired color of BLUE / ORANGE / PURPLE/OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting memory channel=setting co-channel and dis-channel (MEM-CH) ---- MENU 44

When transceiver works in frequencymode or in standby, input the frequency and any kind of parameter what you want to store.

Press [MENU] + number [TXP 4][TXP 4] and the screen will display ["MEM-CH 44"]

Press [MENU] enter, press [UP] / [DOWN] to select channelorder, press [MENU] to store and you hear a voiceprompt if it is stored.

Press [EXIT] to exit, at this moment the channel should be co-channel.

When you need to store dis-channel, repeat the above procedure, after you stored, you will hear a voiceprompt .

Example:

You want 450.025MHz for receive and 460.025MHz for transmit and stored in CH-20, then act as follows:

1. When the transceiver works in frequency mode, input[TXP 4] [SCR 5] [CLK 0] [CLK 0] [SQL 2] [SCR 5] , [MENU] +[TXP 4][TXP 4]
   + [MENU], then press [SQL 2] [CLK 0] or [UP] / [DOWN] key select CH-20, press [MENU] key to confirm, voice prompt will tell you it is stored, press [EXIT] to exit;

2. Then input 〔4〕〔6〕〔◻〕〔◻〕〔2〕〔5〕 + 〔MENU〕+ 〔4〕+ 〔4〕 + 〔MENU〕and voiceprompt will tell you it is stored + press〔EXIT〕 to exit.

3. The dis-channel is stored.

⚠️
NOTE

≫ If you want to set CTCSS, D.C.S, W&N etc functions on parameter please setting before stored. That it can store with frequency in channel.

≫ The transmitting only stored transmit frequency, if you want to store MENU function and parameter, please store with the receiving.

≫ If you want to store by manual, in freuqencymode, and the channel should be vacant, then you can go on operation of store receiving or transmitting or you can only go on the operation of storing transmitting, If it is not vacant you should delete channel to go on the above operation.

Delete channel (DEL-CH) ---- MENU 45

In standby, press 〔MENU〕+ number 〔4〕〔5〕 and the screen will display 〝𝐷𝐸𝐿--𝐶𝐻 45〞

Press 〔MENU〕 enter, press △ / ▽ to select the channel you want to delete, press 〔MENU〕 to confirm.

The select channel and message are deleted, press 〔EXIT〕 to return to standby.

Setting frequencyshift direction (SFT-D) ---- MENU 46

Frequencyshift means that:

1. The transmit frequency is higher than receive frequency. This is called positive offset (+)

2. The transmit frequency is lower than receive frequency. This is called negative offset.(-)

3. Turn off frequencyshift.

In standby, press 〔MENU〕+ number 〔4〕〔6〕 and the screen will display 〝𝑆𝐹𝑇-𝐷 46〞

Press 〔MENU〕 enter, press △ / ▽ and select +/-/OFF.

Press 〔MENU〕 to confirm, then press〔EXIT〕 to return to standby.

Setting offsetfrequency (OFF-SET) ---- MENU 47

Offsetfrequency is the difference between the transmit and receive frequency. The transceiver offset range can be from 0 to 99.950MHz.

In standby press 〔MENU〕+ number 〔4〕〔7〕 and the screen will display 〝𝑂𝐹𝐹𝑆𝐸𝑇 47〞

Press 〔MENU〕 enter, press number 0 to 9 to select offsetfrequency.

Press 〔MENU〕 to confirm, then press〔EXIT〕 to return to standby.

In order to let the transceiver receiving and transmitting under different frequency, the frequencyshift direction and offsetfrequency can only be programmed when the transceiver works in frequencymode.

Follow the next steps:

1. Set working frequency.
2. Set frequencyshift direction and offsetfrequency.

   Example: In frequencymode, the transceiver will work on receive frequency 450.025MHz and transmit frequency will be 460.025MHz.

   In frequencymode, order input [TXP 4] [SCR 5] [CLR] [CLR] [SQL 2] [SCR 5] , press [MENU] +[TXP 4] + [TOT 6] + [MENU] and select positive offset (+); press [MENU] + [EXIT] , then press [MENU] + [TXP 4] + [VOX 7]+ [MENU]+NO.Key and select 10.000+ [MENU]+ [EXIT] and the frequencyshift direction plus offsetfrequency are complete.

The screen will display [450025]

When press PTT key the screen will display [460025]

When you release PTT the screen will display [450025]

Now the receiving frequency is [450025]

The transmit frequency is [460025]

ANI CODE edit (ANI) ---- MENU 48

Every transceiver in the same group must be set different ANI code.

⚠️
NOTE

≫ Because this transceiver has different of 3 bits, 4 bits and 5 bits, so the ANI ID CODE length must keep the same as which used in group.
ANI ID CODE only can be programmed via VR-200F programming software.

Setting VOX-T (VOXT) ---- MENU 50

The purpose of setting VOX-T is to avoided the problem: When after transmitted, transceiver will return to receivedmode immediately, but you can't ensure whether last part of calling can be transmitted or not, so you can set a proper VOX-T then makes calling can be transmitted exactly.

Be careful, don't set VOX-T to a long time.

This transceiver total has 20 levels, unit: 100ms

In standby, press [MENU] +number [SCR 5] [CLR] and the screen will display [VOX-T 50]

Press [MENU] enter, press [UP] / [DOWN] and select one of level between 1 and 20 or 0 not allow delay transmit, press [MENU] to confirm, then press [EXIT] to return to standby.

Companding(COMP) ---- MENU 51

COMP: Use voice compress technology to reduce the noise when on talking, make the voice clear.

In standby, press [MENU] + number [SCR 5][STEP 1] and the screen will display "COMP 51"

Press [MENU] enter, press [UP] / [DOWN] to select ON or OFF.

Press [MENU] to confirm, then press [EXIT] to return to standby.

Setting reset (RESET) ---- MENU 52

The transceiver has a menu which resets VFO and ALL messages.

When you use RESET VFO all parameters of menu will return to factory set.

When you use RESET ALL all menu and channel parameters will return to factory set.

1. MENU reset (VFO):

    In standby, press [MENU] + number [SCR 5][SQL 2] and the screen will display "RESET 52"

    Press [MENU] enter, press [UP] / [DOWN] select VFO, press [MENU] key and the screen will display "SOURE 52"

    Press [MENU] again and the screen will display "WRIT 52"

    When the reset has worked well the transceiver will auto power off and auto switch on again.

2. All message reset (ALL):

    In standby, press [MENU] + number [SCR 5][SQL 2] the screen will display "RESET 52"

Professional FM Transceiver

Press [MENU] enter, press [UP] / [DOWN] and select ALL, press [MENU] and the screen will display "SOURE 52"

Press [MENU] again and the screen will display "WRIT 52"

When reset has worked well, the transceiver will auto power off and auto switch on again.

Setting reverse frequency function

When using reverse frequency function, the transceiver's transmit and receive freuency will interchange and the setting of CTCSS and/or DCS encode and decode will interchange.

■ Operating reverse frequency function:

    In standby, press [SCAN *] and this will turn on reverse frequency function, press [SCAN *] again and this will turn off reverse frequency function.

Lowvoltage batterypack voiceprompt

When the batterypack has lowvoltage, the transceiver will sound "low batterypack"voice prompt.

Setting transmit overtime prompt

When transmitter works longer than settime, the transceiver will announce "transmit overtime" by voice and stops transmitting. If you want to transmit again, please press PTT. (Setting overtime prompt Please see MENU 6)

Adding channelscan

Only scan according programming list which have added channel scan on programming software.

Edit method: 1.Strictly via KG-679E programming software.

2.Edit via adding scan menu 19.

Wireclone function

Using wireclone	Switch sourceradio on,after you have connected the targetradio to the sourceradio via the cloningcable,push the [MONI] key and the sourceradio starts cloning.	LED is flashing red during cloning. LED goes out in case of successful cloning. Glow continuous red in case of cloning failure.
	Targetradio	LED is flashing green during cloning. LED will switch OFF when cloning complete.

Programming repeater function

Most repeaters use standard or different splits and/or matching CTCSS/DCS or DTMF signals.

When you need to join a repeater, you need to set different parameters on receiving and transmitting

Example: The repeater transmit frequency is 450.025MHz, CTCSS value is 67Hz, the receive frequency is 460.025MHz.

When the transceiver needs to join this repeater, you need to follow the following steps:

---

1. Set receive frequency, CTCSS value and transmitting CTCSS value and store this on appointed channel, example channel 20. The transceiver in frequencymode, setting receive frequency to 460.025MHz, transmitting CTCSS vallue is 67Hz, and store to channel 20. The operation is as follows:
   In frequencymode, order input [TXP4] + [TOT6] + [CLK□] + [CLK□] + [SQL2] + [SCR5] , [MENU] + [STEP1] + [SQL2] + [MENU] press [UP▲] / [DOWN▼] and select CTCSS value 67Hz + [MENU] + [EXIT] , [MENU] + [TXP4] + [TXP4] + [MENU] + [SQL2] + [CLK□] + [MENU] voice prompt receive store, press [EXIT] key.

2. Setting transmitfrequency, and store on appoint channel 20. The transceiver in frequencymode, setting transmitfrequency as 450.025MHz, and store on channel 20.
   In frequencymode, order input [TXP4] + [SCR5] + [CLK□] + [CLK□] + [SQL2] + [SCR5] , [MENU] + [TXP4] + [TXP4] + [MENU]; [MENU] + [SQL2] + [CLK□] . Voiceprompt transmit store, press [EXIT] key.

3. Press [MENU] , turn on the power at the same time, the transceiver work in channel mode at this time, press [UP▲] / [DOWN▼] select channel 20, the transceiver can join repeater.

How to use the intelligent charger

1. When the poweradapter is connected the intelligentcharger, the poweradapter should be plugged into the matchingvoltage. The intelligentcharger will flicker once, then go into the standby mode which means that you can charge the batterypack; When you plug in the batterypack, the intelligentcharger will switch to red LED which means that it has being charged.

2. When the green light flickers, the batterypack is fully charged.

3. After you plug in the batterypack which the voltage is lower than 6V (it is lower than 6V if you can not power on the transceiver), the red LED flickers which means that the batterypack is being trickle charged by intelligentcharger and this will last about 10 minutes. When the light turns red, it will go into the normal charge.

4. After you plug in the batterypack which the voltage is higher than 6V(it is higher than 6 V if you can power on the transceiver), the red LED flickers, at this time, please confirm whether the batterypack is plugged in right with intelligentcharger.

Please check carefully if your transceiver has problems by following this chart.
If you maintain to have trouble you can reset your transceiver and very often this will eliminate your problem.

Problem	Possible Cause	Possible Solution
Transceiver will not switch on.	1. The batterypack is not installed properly. 2. The batterpack maybe exhausted. 3. The batterypack is getting too old.	1. Re-install the batterypack. 2. Charge the batterypack. 3. Change the batterypack.
The receiverlight is on and there is no sound from the speaker.	1. The powerswitch is not adjusted well. 2. Confirm if your CTCSS/DCS tone is the same as others. 3. Confirm if you use the right mutemode.	1. Turn the volumecontrol. 2. Reset the CTCSS/DCS 3. Reset the mutemode.
There is no reception	1. Check if you have installed your antenna right. 2. The signal you are receiving is very weak.	1. Install the supplied antenna. 2. Move the radio around till you receive the desired signal or press ▼ to reset and then press ▲ to go to right channel.

Technology specification

Frequencyrange	VHF: 66-88MHz
	VHF: 136-174MHz VHF: 245-246MHz
	UHF: 300-350MHz UHF: 350-390MHz
	UHF: 400-470.9875MHz UHF: 450-520MHz
Memorychannels	200 channels
Voltage	7.4V DC
Working temperature	-30C(-22F) to +60C(140F)
Channels	Co-channel or Dis-channel simplex
Poweroutput	VHF: 5W / UHF:4W
Mode	F3E(FM)
Maximum deviation	∗ ±5KHz
Adjacent channel power	< -60dB
Stability	±5 ppm
Sensitivity	< 0.2 μV
Audio output power	∗ 700mW
Weight	265g
Size	63 X 106 X 39 (mm) 2.49x4.18x1.54(inch)

$\triangle$!
